SKILLS

Languages: Java, Python, JavaScript, C#

Frontend: React.js, Next.js, HTML5, CSS3, Tailwind CSS, Bootstrap, Vite, Bootstrap, VueJS

Backend: FastAPI, Supabase, MongoDB, Node.js, Express.js, Render, Python

EDUCATION

Bachelor of Science in Computer Science
University of Cabuyao (Pamantasan ng Cabuyao) | 2022-2026

- With Honors: 2nd Year, 1st Semester (2024)
- Award: Best Thesis Award

ZUITT Tech Program
September–November 2024

- Main Course Package (MERN) — Full-Stack Development

PROFILE

Computer Science graduate with full-stack development experience through a software development internship and multiple academic and personal projects. Experienced with Java, Python, JavaScript, C#, React, Next.js, FastAPI, and Supabase. Developed web applications, backend services, automation tools, and interactive software. Strong foundation in software development, problem solving, and data structures.

RELATED EXPERIENCE

Full-Stack Development Intern | First Laguna Land Bank
February 2026 – April 2026

- Developed a full-stack resort booking and property-listing management system using Next.js, Tailwind CSS, and Supabase.
- Automated the reservation workflow from booking request through checkout.
- Developed real-time messaging between customers and property owners.
- Created a WYSIWYG editor with live preview for property descriptions.

Full-Stack Development | Undergraduate Thesis Project
January 2025 – December 2025

- Developed a symbolic differentiation web application using React, Python and FastAPI.
- Generated step-by-step derivative solutions through programmatic expression processing.
- Implemented a custom parser for analyzing and evaluating mathematical expressions.
- Compared multiple data structures to improve mathematical expression processing.

Backend Development | Personal Project
August 2025 – May 2026

- Developed a Discord bot for ticket management and helper coordination using JavaScript, Discord.js, Supabase, and Render.
- Automated ticket creation, role notifications, and point tracking.
- Built interactive commands and role-based permissions.

Game Development | Academic Project
February 2025 – June 2025

- Developed a Sokoban puzzle game using Unity and C#.
- Built rule-based object interactions and gameplay mechanics.

- Developed reusable C# game systems using object-oriented programming principles and modular components.
